

UrSOSButton

Personal

UrSOSButton™ gives you, your family, friends and colleagues true peace of mind knowing that **help is only a button press away**.

It's simple to use and **no data connection** is needed to send an alert. Your **screen can be locked** with a pin code and it will still work. It's **designed to be an SOS button**.

UrSOSButton™ works in conjunction with an Android Smartphone via Bluetooth. When activated, **UrSOSButton™** instructs your phone to send **SMS text alerts** containing a Map link to your location, GPS coordinates, Nearest Address and custom text/information to 5 nominated contacts. To further enhance your safety and security **UrSOSButton™** can also **automatically call** 5 selected contacts.

Weighing less **than 16 grams**, **UrSOSButton™** can be attached to a key chain or lanyard or popped into a shirt pocket and be **barely noticeable**. Its' design makes it **easy to use discreetly** and because of **in-built vibration feedback** no one would know but the user when it's activated.

UrSOSButton™ is there when you need it. Just press the button and alerts messages and voice call are sent to your contacts.
